

Service Specifications

SekurMail turns the email into a Secure and Private platform with the highest Security and Privacy standards using end to end encryption for messages between SekurMail users and with external users

Our backend email servers provide the most secure environment for your digital communications. On top of the multilayer encryption, we use our proprietary technologies virtual Vault y Helix to fully secure all data stored on disk and all data that is transmitted across the network.

SekurSend

Allows the user to send an encrypted email to anyone, regardless ISP and gives you access to multiple enhanced security features:

- Password that must be entered to read the email.
- Option to limit the number of times a message can be read.
- Set an expiry date or time and the message can no longer be accessed.

SekurRelay

SekurRelay lets a company IT staff easily migrate their existing business email to Sekur's privacy and security email platform.

With Sekur Relay you can protect your most important staff with privacy and encryption for every email seamlessly while maintaining the same business email domain as the rest of the employees.

Proprietary technology

We execute all transmission and exchange of data within our secure server platform environment.

Data is transferred from device to secure servers in an encrypted tunnel. Our company uses proprietary multiple vaults encryption layers segregating user's data in virtual vaults with individual keys.

App features:

Compose and send emails inside your common email application or via webmail normally.

Set Self-Destruct timers and password protected individual emails and hide content from recipient ISP.

Messages never leave our secure systems and cannot be intercepted.

Messages are encrypted and secured with our proprietary multi-level encryption (secured environment, secure communication and secure storage).

Email files securely up to 5GB each with SecureSend with outside users or within the organization.

Messages are automatically purged from our systems with no residual backup once you delete them.

Works with any email address and supports unlimited external recipients with enterprise end-to-end encryption within and outside organization users.

Features for business:

- Mass Onboarding
- User Management
- Admin tool
- Sekur Relay
- Archiving control
- 2FA
